

## Spray lance SL-1

For manual cleaning with the door open.

The cleaning machine can be equipped with a manually operated spray lance for washing either before or after the main wash. It is useful for cleaning those places the spray pipe assembly is unable to reach. The manually operated spray lance can be used only when the machine door is open.

Cleaning must be carried out with the door open and the articles to be washed must be inside the machine so that the cleaning liquid returns back into its tank.  
Use goggles.
